

# Using Multiple Master fonts

## Xitron Navigator Technical Note

September 10, 1998

Due to their “changeable” nature, Multiple Master fonts cannot reside at the RIP. Whenever they are used they must be downloaded in the PostScript file. Many older versions of software do not recognize Multiple Master fonts so it is recommended that you use the latest versions of your composition software. It is also suggested that you store any Multiple Master fonts to be used in the System\Fonts folder.

Also, not all versions of LaserWriter and ATM software will work with Multiple Master fonts. Adobe’s helpline suggests that customers use ATM 3.9 or higher and Adobe’s PS Printer 8.31 (PS Printer 8.31 is available on the Adobe web site at [www.adobe.com](http://www.adobe.com)). After testing at Xitron it was found that Apple LaserWriter 8.5.1 will also work with Multiple Master fonts.
