Xitron Announces Navigator *Elite* Workflow Bundle

Fully featured digital workflow with Harlequin core RIP and Xitron workflow technology

All-inclusive with preconfigured prepress workflow software;

Onsite installation and training by Xitron Support and Xitron TotalCare™ Support Program

Ann Arbor, Michigan – June 2, 2009 – Xitron, the prepress industry's leading independent developer of prepress workflow and interface solutions, today announced the availability for North America of the Navigator *Elite* Workflow bundle, a full featured prepress workflow solution for commercial and in-plant printers.

Navigator *Elite* Workflow bundles include the premier workflow solution in the widely acclaimed Navigator GPS family in a complete bundle with:

- Navigator *Elite* Workflow software on preconfigured computer platform
- Onsite installation and training by Xitron Support Specialists
- Xitron *TotalCare™* Support Program with unlimited telephone and email support
- Interface to one of more than 250 different output devices supported by Xitron

“To make the most of any new prepress workflow purchase, it is essential that the printer receive proper training and support,” stated Mark Eisenschenk, Xitron's President and Chief Executive Officer. “Xitron's Navigator *Elite* Workflow bundles are all-inclusive, providing the customer not only with the best workflow solution for their business but also the training and ongoing support necessary for them to achieve maximum benefit from their investment.”

Navigator *Elite* Workflow is designed for prepress departments in need of no-nonsense, productive, and economical solutions that combine operator convenience with all the tools necessary to effectively drive prepress work to the pressroom. Some of those tools include:

- Integrated Imposition
- Ink Remapping
- User controllable job management and ticketing capabilities
- Integrated soft proofing
- Output device control and feedback at operator workstations
- PDF Creation and Preflighting

An exceptional tool for job tracking, load balancing, PDF creation, preflighting and automated job preparation; Navigator *Elite* Workflow includes features and capabilities that can substantially increase the productivity of the prepress department.

Imposition Integrator stores impositions within the workflow alongside single-page files, preflight reports, proofs, and plate files. The Imposition Integrator was initially developed to work with Dynagram's inpO2, but will work with other imposition solutions as well.

Ink Remapping allows the user to easily re-assign inks to specific plates, ensuring the proper numbers of plates are created for each job.

Scriptable Hot Folders allow users to define the workflow to fit their needs, customizing the way Navigator *Elite* Workflow routes incoming jobs.

KeySetter ink key calculator option prints a clearly labeled color chart of the calculated press ink key settings for each job, saving make-ready time even on presses without electronic ink key adjusters.

PRINTERnet, Xitron's affordable web-to-print solution option, automates customer job submission, preflighting and raster proofing (from the production RIP) through a simple web interface. With PRINTERnet, the prepress operator's first interaction with a new job is often just a matter of releasing it to output.

Xitron offers Navigator *Elite* Workflow bundles in North America through Xitron's extensive network of prepress workflow solution providers. Outside North America, Xitron dealers and distributors provide somewhat similarly configured workflow solutions.

Special customer and competitive upgrade incentives are being offered now through June 30, 2009. To schedule an on-line demonstration or obtain more information about Xitron products visit www.xitron.com or contact a Xitron distributor or dealer worldwide.

About Xitron

Xitron, the software and interface group of Vanguard Graphics International, develops flexible workflow systems and interfaces designed to drive the prepress industry's most popular new and legacy output devices. This prolongs and protects customers' investments. Xitron's Navigator RIP, Raster Blaster TIFF Catcher, and Xenith Workflow solutions are recognized as pre-press standards. Built around core technology from Global Graphics and Adobe Systems, Xitron engineers continue to develop stable, yet flexible solutions for the graphic arts market, driving over 250 different models of imagesetters, proofers, platesetters, and digital presses. With shipments of more than 16,000 RIPs, Xitron is the largest independent provider in the market. For more information about Xitron, visit us at www.xitron.com.
