

PDF Font Problems in Navigator 4.5r0

Xitron Navigator Technical Note

August 3, 1998

We have recently discovered some issues with Navigator 4.5r0 when printing Adobe PDF files directly. The symptoms are fonts becoming italic and/or special extended characters dropping out altogether when RIP-ed. This problem has exhibited itself when PDF files include languages other than English.

A work around solution for this is to print to a postscript file from Adobe Acrobat or Adobe Acrobat Reader. However, a more complete solution is to upgrade to a newer version of the RIP.
